No. 414
JULY-AUGUST 2005

The population of the world (2005)

Gilles Pison*

Every other year, the summer issue of *Population and Societies* called *The population of the world* presents a global picture of the world population. The data shown here can be found in the *World Population Data Sheet* published by the Population Reference Bureau (PRB) [1] (1).

The data shown in the central data sheet concern all geopolitical entities with a population of 150,000 or more and a few others. Sovereign states are listed along with non-sovereign territories, including France's overseas departments. Countries and territorial entities are listed following the United Nations' system of classification per region and continent.

The demographic indicators are the same as those used in earlier editions: land area, mid-2005 population estimate, birth and death rates, population projection for 2025, infant mortality rate, total fertility rate, percentage of population under 15 and over 65, male and female life expectancy at birth, gross national income per capita adjusted for purchasing power parity (GNI PPP) in 2003, proportion of persons with HIV/AIDS among the adult population aged 15 to 49 at the end of 2003 (these figures include persons who are suffering from AIDS as well as those who have been infected by the virus but are not yet ill).

Eighteen smaller tables classify countries or geopolitical entities according to different indicators, following a downwards scale. In the first eight tables, a world total is given and a line separates the countries totalling more than half of the world figure. For instance, the six

most populated countries (China, India, United States, Indonesia, Brazil, Pakistan) represent a total population of 3.3 billion, or more than half of the world population, estimated at 6.5 billion. In the seventeenth small table, countries are classified according to the proportion of inhabitants aged 15-64 in the total population. It gives an idea of the size of the working-age population. It is especially high in the small Persian Gulf states, which have a large population of immigrant workers who have entered these countries without their families, and in countries where fertility has dropped sharply to very low levels (Russia, Spain). The proportion of persons of working age is also very high in Southern countries where fertility has declined very quickly in recent years (China, South Korea, Tunisia). Their age pyramid now has a very narrow base. Its summit is also very small, though this situation is destined to change as the proportion of persons aged 15-64 decreases due to population ageing.

Notes

• **World and regional totals.** Regional population totals are independently rounded and include small countries or areas not shown in the table. Regional and world rates and percentages are weighted averages of countries for which data are available; regional averages are shown when data are available for at least three quarters of the region's population.

• **The tables** taken from the *World Population Data Sheets* should **not be used as a time series**. Fluctuations in values from year to year often reflect revisions based on new data or estimates rather than actual changes in levels. Additional information on likely trends and consistent time series can be obtained by consulting publications of the organizations listed above.

• **Area.** This refers to the "land area" or "total area" of the country, excluding area under inland water bodies, i.e. major rivers and lakes. Variations are due to updates and revised data provided by the countries and do not necessarily reflect an actual change in the country's area. The PRB used the data provided by the last *FAO Production Yearbook*.

• **Population mid-2005.** Estimates are based on a recent census, official national data, or UN and U.S. Census Bureau projections. The effects of refugee movements, large numbers of foreign workers and population shifts due to contemporary political events are taken into account to the extent possible. Such events can lead to a high degree of uncertainty in the estimates.

• **GNI PPP.** This is gross national income converted to US dollars using a purchasing power parity (PPP) factor; this indicator is not available for all countries.

XXV IUSSP International Population Conference

At the kind invitation of the French Government, the XXV IUSSP International Population Conference was held at the Vinci Convention Centre in the city of Tours, France. 18-23 July 2005.

Over 2000 participants attended the Conference, coming from 108 different countries and representing 119 different nationalities.
