Daily report and statistics about coronavirus and COVID-19

Published 12.03.2020 Updated 14.05.2021

Here is a selection of key data and statistics about SARS-CoV-2 and COVID-19 disease in Norway. The figures are updated at approximately 1 p.m.

Key figures for Norway

Total number in Norway since February 2020 (cumulative figures):

TESTED 5 457 837 14/05/2021	REPORTED CASES 118 275 14/05/2021
ADMITTED TO HOSPITAL 4 339 14/05/2021	ADMITTED TO ICU 831 14/05/2021
DEATHS 774 14/05/2021	

Number tested

20.04.2021: Figures showing the number of people tested and the number and proportion of positive results among these have been updated. The figure shows data from 1 April 2020. The positive cases in this figure are now based on reported cases to the Communicable Diseases Notification System (MSIS). There are therefore some adjustments in the data compared to the previous figure. In the period before 1 April 2020, the number of tests was based on data collected from the microbiological laboratories that analysed SARS-CoV2 samples during this period. The total number of tests in this period is 102,560.

The laboratory results are collected in the MSIS Laboratory Database. Each laboratory in Norway submits data electronically directly to the database. The figure below illustrates the number of persons tested and the proportion of positive test results among these daily since 1 April 2020.

"Number of people tested": A new test on a person is defined as a test performed at least 7 days after the previous test on the same person. If the person is tested again after 7 days, they are counted as a new person. Figures from the last few days may be adjusted with the next update.

Number of tested persons per specimen collection date and number of positive results

Reported cases

The figure below shows the number of cases reported daily in Norway since the start of the epidemic. The cases are displayed by the specimen collection date. There are 1-2 days delay between diagnosis and registration in the Norwegian Surveillance System for Communicable Diseases (MSIS). The number of cases is updated retroactively when new notifications arrive.

Number of reported cases by municipality

Folkehelseinstituttet
Updated May 14

Double click on the map where you want to zoom in or scroll with your mouse to zoom in and out.

The figure is updated with the number reported by midnight on the previous day. Cases in MSIS are registered geographically and are based on the address in the population register. Therefore, there may be more cases reported in a municipality in MSIS than the municipality is aware of. MSIS also receives notifications that are not sent to the Municipal Medical Officer.

If you cannot find a municipality in the list, it means that MSIS has not yet received any notifications about people registered in that municipality.

Hospital admissions

The figure below illustrates the number of new patients admitted to hospital with COVID-19 as the main reason for admission.

COVID-19-associated deaths, by age and sex

The figure below illustrates the number of COVID-19 associated deaths notified to the Norwegian Institute of Public Health, divided by sex and age group.

Number of COVID-19 associated deaths by sex and age

Sort ascending by Age	Sort ascending by Women	Sort ascending by Men
<i>Updated: May 14</i>		
0-39	2	4
40-49	5	6
50-59	6	27
60-69	27	66
70-79	66	109
80-89	120	140
>=90	133	63

Weekly reports and older daily reports

Daily and weekly reports (in Norwegian)

The last daily report in pdf-format was published on Friday 19th June 2020. Most of the diagrams in the report are shown in the diagrams and tables above. These are updated on weekdays at approximately 1 p.m.

- [COVID-19 weekly reports](#)
- [Older daily reports](#)

Other COVID-19 statistics

Reproduction number - R

The reproduction number R will be presented weekly in the [weekly report \(English summary\)](#).

Inpatients in hospital

- [COVID-19 - number of patients admitted to hospital](#) (Directorate of Health)

Total mortality

The NIPH also calculates the total mortality in Norway through the NorMOMO-system. The status for total mortality is mentioned in the weekly reports.

HISTORY

20.04.2021: Figures showing the number of people tested and the number and proportion of positive results among these have been updated. The figure shows data from 1 April 2020. The positive cases in this figure are now based on reported cases to the Communicable Diseases Notification System (MSIS). There are therefore some adjustments in the data compared to the previous figure. In the period before 1 April 2020, the number of tests was based on data collected from the microbiological laboratories that analysed SARS-CoV2 samples during this period. The total number of tests in this period is 102,560. The laboratory results are collected in the MSIS Laboratory Database. Each laboratory in Norway submits data electronically directly to the database. The figure below illustrates the number of persons tested and the proportion of positive test results among these daily since 1 April 2020. "Number of people tested": A new test on a person is defined as a test performed at least 7 days after the previous test on the same person. If the person is tested again after 7 days, they are counted as a new person. Figures from the last few days may be adjusted with the next update.

23.10.2020: Temporarily removed table display in timeline graphs because of an error. The supporting data can still be downloaded in CSV and Excel via the menu.

19.10.2020 Changes in way test activity is presented - we present the number of tests performed as well as the number of people tested.

24.09.2020: Error in update for 24.9: In the update dated 24.9, it is reported that there were three new deaths during the last three weeks. An error means that one death was reported for a person under 40 years of age. This should be two deaths for people aged over 90 years and one death for a person aged between 80-89 years. NIPH is working to correct the error.

26.05.2020: Many of the figures are now available with data that can be downloaded.
