No. 436  
JULY-AUGUST 2007

## The population of the world (2007)

Gilles Pison\*

Every other year, the summer issue of *Population and Societies* called *The population of the world* presents a global picture of the world population. The data shown here can be found in the *World Population Data Sheet* published by the Population Reference Bureau (PRB) (1) [1].

The data shown in the central data sheet concern all geopolitical entities with a population of 150,000 or more and a few others. Sovereign states are listed along with non-sovereign territories, including France's overseas *départements*. Countries and territorial entities are listed following the United Nations' system of classification by continent and region.

The demographic indicators are the same as those used in earlier editions: land area, mid-2007 population estimate, birth and death rates, population projection for 2025, infant mortality rate, total fertility rate, percentage of population under 15 and over 65, male and female life expectancy at birth, gross national income per capita adjusted for purchasing power parity (GNI PPP) in 2005, proportion of persons with HIV/AIDS among the adult population aged 15 to 49 at the end of 2005 (these figures include persons who are suffering from AIDS as well as those infected by the virus who are not yet ill).

For many countries severely affected by AIDS, the estimated percentage of the population aged 15-49 with HIV/AIDS is much lower than that given in the previous edition of *The population of the world (2005)*, notably in southern Africa. In South Africa, for example, the percentage is 18.8%, compared with 21.5% in 2005. This

(1) Each year, this independent organization provides summary data sheets using figures issued by different sources – mainly the United Nations Population Division [2], the United States Census Bureau, the Council of Europe and INED [3] – based on all demographic data published by national statistics agencies and international organizations..

\* Institut national d'études démographiques

does not signify that the epidemic has declined over the last two years. In fact, it has continued to spread. But the availability of more exhaustive and reliable data has led to a downward adjustment of estimates. The same is true for less affected countries, such as India, where the estimated proportion of infected adults is only one-half or one-third that given for 2005: 0.36% versus 0.9%. The population of India being over one billion, the number of infected adults has been revised downwards by two to three million. But here too, the epidemic is not truly receding.

Eighteen smaller tables classify countries or geopolitical entities according to different indicators, following a downward scale. In the first eight tables, a world total is given and a line separates the countries totaling more than half of the world figure. For instance, the seven most populated countries (China, India, United States, Indonesia, Brazil, Pakistan, Bangladesh) represent a total population of 3.4 billion, or more than half of the world population, estimated at 6.6 billion.

### Notes

- **World and regional totals** – Regional population totals are independently rounded and include small countries or areas not shown in the table. Regional and world rates and percentages are weighted averages of countries for which data are available; regional averages are shown when data are available for at least three quarters of the region's population.
- **The tables** taken from the *World Population Data Sheets* should **not be used a time series**. Fluctuations in values from year to year often reflect revisions based on new data or estimates rather than actual changes in levels. Additional information on likely trends and consistent time series can be obtained by consulting publications of the organizations listed above.
- **Area** – This refers to the “land area” or “total

area” of the country, excluding area under inland water bodies, i.e. major rivers and lakes. Variations are due to updates and revised data provided by the countries and do not necessarily reflect an actual change in the country's area. The PRB used the data provided by the last *FAO Production Yearbook*.

- **Population mid-2007** – Estimates are based on a recent census, official national data, or UN and U.S. Census Bureau projections. The effects of refugee movements, large numbers of foreign workers and population shifts due to contemporary political events are taken into account to the extent possible. Such events can lead to a high degree of uncertainty in the estimates.
- **GNI PPP** – gross national income converted to US dollars using a purchasing power parity (PPP) factor; this indicator is not available for all countries.

**To find out more  
about the world population,  
visit the INED website at  
[www.ined.fr](http://www.ined.fr)**

The “All about population” and “Population in figures” sections give a wide array of information about the world population.

- Use the population atlas to see the United Nations population statistics. You can navigate from one country to another, view demographic trends, classify and compare different countries.
- Play interactive population games: use the “population simulator” to look into the future or go to “the population and me” to see where you stand in the world population.

And don't miss our animations, videos, teaching kits, graph of the month and in-house publications.
