The Population of the World (2015)

Gilles Pison*

Every other year, *Population and Societies* publishes a special issue called *The Population of the World*, presenting an overall picture of the situation across the globe.** There were around 7.3 billion humans on the planet in 2015. The world population has risen seven-fold over the last two hundred years and may well reach 11 billion by the end of the twenty-first century.

The data shown in the central data sheet concern all geopolitical entities with a population of 150,000 or more, along with a few others. Sovereign states are listed along with non-sovereign territories, including France's overseas *départements*. Countries and territorial entities are listed following the United Nations system of classification by region and continent.

The demographic indicators are the same as those used in earlier editions: land area, mid-2015 population estimate, birth and death rates, infant mortality rate, total fertility rate, percentage of population under 15 and over 65, male and female life expectancy at birth, gross national income per capita adjusted for purchasing power parity (GNI PPP) in 2014. Note that the indicators are projections, but over a short period, as vital statistics and survey data are not yet available for the year 2015.

Eighteen smaller tables classify countries or geopolitical entities according to different indicators, following a downward scale. In the first eight tables, a world total is given and a line separates the countries which together account for more than half of that total. For instance, the seven most populated countries (China, India, United States, Indonesia, Brazil, Pakistan, Nigeria) represent a total population of 3.85 billion, or more than half of the world population, estimated at 7.34 billion. In Table 7, countries are ranked by number of maternal deaths in 2013, and in Table 10 by maternal mortality rate. These estimates are relatively uncertain, notably for countries where maternal mortality is high.

In the 17th and penultimate small table, countries are classified according to the proportion of working-age persons aged 15-64 in the total population. This proportion is especially high in the small Persian Gulf states, which have large populations of immigrant workers living without their families, and in countries where fertility has fallen sharply to very low levels (Russia, Poland). Persons of working age also represent a large proportion of the total population in Southern countries where fertility has also declined rapidly in recent years (China, Iran, Vietnam). Their population pyramids have narrowed at the base, while their summit is still very small. Their shape will change, however, as the proportion of persons aged 15-64 decreases due to population ageing.

* French Institute for Demographic Studies.

** The data are drawn mainly from the *World Population Data Sheet* published by the Population Reference Bureau (PRB) [1]. Each year, this independent organization provides summary data sheets using figures issued by different sources – mainly the United Nations Population Division [2], the United States Census Bureau, the Council of Europe and INED – based on all demographic data published by national statistics agencies and international organizations.

Notes

- **World and regional totals** – Regional population totals are independently rounded and include small countries or areas not shown in the table. Regional and world rates and percentages are weighted averages of countries for which data are available; regional averages are shown when data are available for at least three quarters of the region's population.
- **The tables taken from the World Population Data Sheets should not be used as a time series.** Fluctuations in values from year to year often reflect revisions based on new data or estimates rather than actual changes in levels. Additional information on likely trends and consistent time series can be obtained by consulting publications of the organizations listed above.
- **Area** – This refers to the “land area” or “total area” of the country, excluding area under inland

water bodies, i.e. major rivers and lakes. Variations are due to updates and revised data provided by the countries and do not necessarily reflect an actual change in the country's area. The PRB used the data provided by the last FAO Production Yearbook.

- **Population mid-2015** – Estimates are based on a recent census, official national data, or UN and U.S. Census Bureau projections. The effects of refugee movements, large numbers of foreign workers and population shifts due to contemporary political events are taken into account where possible. Such events can lead to a high degree of uncertainty in the estimates.
- **GNI PPP** – gross national income converted to US dollars using a purchasing power parity (PPP) factor; this indicator is not available for all countries.

To find out more about the world population, visit the INED website at www.ined.fr/en/

The “All about Population” and “Population in figures” pages give a wide array of information about the world population.

- Go to the “Population maps” and “Population in figures” pages to see the United Nations population statistics. You can navigate from one country to another, view demographic trends, classify and compare different countries.
- You can play interactive population games by using the “Population simulator” to look into the future, or go to “The population and me” to see where you stand in the world population. Discover our animations, videos, fact sheets and publications.
